

Pet Adoption Mobile Application

The **Pet Adoption Mobile Application** is a community-based platform that helps people find and adopt pets while also giving animal lovers a way to support animals in need. Users can browse available pets, search and filter them, view detailed information, apply for adoption, and track their application status.

The app also allows users to report a **stray, injured, abandoned, or lost animal** by uploading its photo, location, and description. Administrators or volunteers can review these reports and help with rescue and care.

Animal lovers can also **donate pet food, clothes, blankets, toys, and other useful supplies**. Shelters or animal-care groups can post their requirements so users can provide the support they need.

The application brings **adopters, animal lovers, volunteers, and shelters** together on one platform, making pet adoption and community support easier and more organized.
